Silence in Nature

It is a remarkable and very justructive fiel, that many of the most in portant oper ations of nature are ear ed a 11 unbroken silence. There is no rushing sound when the broad tide of sublight breaks on a dark world and floods it with hight, as one bright wave over another falls from the fount in, millions of millions of miles away There is no creating of axes, or grounted of cum-brous machinery, as the solid earth wheels on its way and every planet and system performs its revolutions. The great trees bring forth their boughs and shadew the earth beat ith them - the plants cover them selves with buds burst into flowers, but the whole transaction a onlead.
